The Dynamics of Refugee Return

Syrian Refugees and Their Migration Intentions

Ala’ Alrababa’h, Daniel Masterson, Marine Casalis, Dominik Hangartner, Jeremy Weinstein

January 2022

Immigration Policy Lab: Stanford University and ETH Zürich

Research Questions

How do refugee crises end?

1. In any given year roughly 1-2% of refugees will be resettled, and less than 1% will be granted citizenship in a hosting country. Most face prolonged displacement or return.
Research Questions

How do refugee crises end?

1. In any given year roughly 1-2% of refugees will be resettled, and less than 1% will be granted citizenship in a hosting country. Most face prolonged displacement or return.

2. Influence economics, politics, and security for refugees, host countries, places of origin, and policy community.

2. Influence economics, politics, and security for refugees, host countries, places of origin, and policy community

3. We ask: **Who** decides to return home, **when**, and **why**?

4. We gather representative survey data on return and study its drivers with observational and conjoint analysis
Theory
Theory

**Theoretical expectations:**
What drives refugees’ return intentions and preparations?

**Pull factors in Syria:**
Safety, control, economic well-being, services, networks

**Push factors in Lebanon:**
Economic well-being, services, social well-being, networks, legal status

**Mobility Costs and Information**
Research Design
Survey Design

- Nationally representative survey of \( \approx 3000 \) Syrian refugee heads of household
- Conducted between August and October 2019
- First stage: stratified sample along two dimensions: prevalence of Syrians and sectarian component of Lebanese
- Second stage: random walk within each locality
- Measured household characteristics, predictors of return, return intentions, and included a conjoint experiment
Findings from Survey
Return Plans and Expectations

Bar chart showing the percentage of people expecting returns in different periods:
- Return in 1 year: 5%
- Return in 2 years: 27%
- Return ever: 63%
Predictors of Intentions and Preparations
Predictors of Intentions and Preparations

Study relationship between return intentions and plans and respondents’ situation in Lebanon and Syria, based on numerous survey variables.

Used survey questions to create indices that measure four different categories:

- Pull factors in Syria
- Push factors in Lebanon
- Mobility costs
- Information
We use five different indices of pull factors in Syria

1. Physical safety in hometown
2. Control of hometown in Syria
3. Economic prospects in hometown
4. Services provision in hometown
5. Personal networks in Syria
Push factors in Lebanon

We use five different indices of push factors in Lebanon:

1. Economic well-being in Lebanon
2. Access to services in Lebanon
3. Personal networks in Lebanon
4. Social well-being in Lebanon
5. Legal status in Lebanon
Mobility cost and confidence in information

We also examine how mobility costs and access to information are correlated with return intentions and preparation

1. Travel distance + household size

2. Access and confidence in information about place of origin
Predictors of Intentions and Preparations, All Results

- **Pull factors in Syria**
  - Safety
  - Regime control
  - Economic well-being
  - Services
  - Networks

- **Push factors from Lebanon**
  - Economic well-being
  - Services
  - Networks
  - Social well-being
  - Legal conditions

- **Mobility cost**
  - Log travel distance
  - Log household size

- **Information**
  - Confidence in information

---

**Return in 12 months**

- **Effect on Likelihood of Intending to Return**

- **Prepare to return**

- **Effect on Likelihood of Preparing to Return**
Conjoint Experiment
Conjoint Experiment

Read to respondents a description of a future situation in Syria and Lebanon. We randomly varied the following features:

- Security situation in Syria
- Economic prospects in Syria
- Services in Syria
- Conscription
- Economic prospects in Lebanon
- Access to public services in Lebanon
- Family and friend network
Conjoint Experiment

Example:

Imagine that one year from now, all of Syria is quite safe. It appears that in [insert hometown], there are many job opportunities. As for conscription, military conscription is still in place. In Lebanon, health centers and schools are available and affordable. Finally, regarding your friends and relatives, most of them are in Syria. Under these conditions, would you return to Syria?
Conjoint Experiment – All Results

Safety
- Hometown not safe
- Hometown safe
- All Syria safe

Jobs in Syria
- Few job opportunities
- Many job opportunities

Public Services in Syria
- Unavailable public services
- Available public services

Conscription
- Military conscription remains
- Military conscription ended

Jobs in Lebanon
- Lack good job
- Possess good job

Public services in Lebanon
- Public services not available
- Public services available

Networks
- Friends/family elsewhere
- Friends/family in Lebanon
- Friends/family in Syria

Effect on probability of intending to return: −0.1 0.0 0.1 0.2 0.3 0.4
Results Overview

- Relatively few Syrians said they plan to return by October 2020 (5%). Most want to return in long term but not soon
Results Overview

• Relatively few Syrians said they plan to return by October 2020 (5%). Most want to return in long term but not soon.

• Predictors of return intentions, in decreasing importance:
  • Safety conditions in Syria
  • Economic conditions and availability of public services in place of origin
  • Networks of family and friends
  • Conditions in Lebanon
Key Takeaways

- Results reaffirm the fundamental humanitarian mandate of the refugee protection regime
Key Takeaways

• Results reaffirm the fundamental humanitarian mandate of the refugee protection regime

• Efforts to push refugees to return are unlikely to be effective
Key Takeaways

• Results reaffirm the fundamental humanitarian mandate of the refugee protection regime

• Efforts to push refugees to return are unlikely to be effective

• Humanitarian organizations should focus efforts on supporting refugees in host country while improving conditions in place of origin
Key Takeaways

- Results reaffirm the fundamental humanitarian mandate of the refugee protection regime
- Efforts to push refugees to return are unlikely to be effective
- Humanitarian organizations should focus efforts on supporting refugees in host country while improving conditions in place of origin
- Credible information dissemination seems important
